

BUNGARTZ BOILING SITUATION AND CONDENSATE.

- generally no danger presented by cavitation (NPSH ~ 0m)
- automatic adaptation to fluctuating supplies
- reduction of plant costs due to continuous operation
- no condensate tank is required
- no pit / no frameworks are required
- virtually no control technology necessary
- no minimum volume flow
- no pressure shocks due to continuous operation
- safe to run dry
- self-venting
- delivery possible direct from negative pressure
- wear-free, hydrodynamic shaft seal
- extremely accessible due to intrinsically safe physical features
- minimal maintenance cost

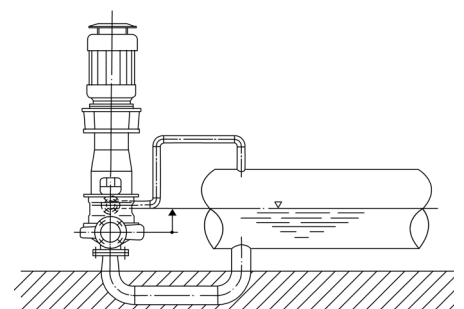

OTHER APPLICATION EXAMPLES.

COOLING WATER PUMPS

CONDENSATE COLLECTOR

UNDER HOTWELL
